QUADCORE® KS1000RW ROOF AND WALL PANEL, FAWS

DATE: MAY 2022

The purpose of the Technical Bulletin is to make you aware of the changes to the FAWS (Factory Applied Weather Seal) on the Quadcore® KS1000RW insulated roof and wall panels sidelap. Using Quadcore® KS1000RW with sidelap FAWS can reduce installation time, reduce site waste and reduce costs.

Product that is Changing

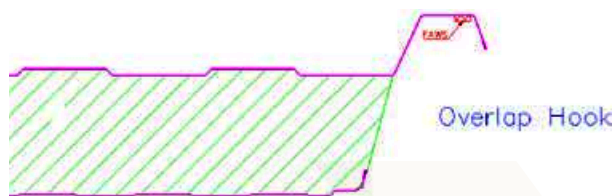

- FAWS arrangements.

Date of Change

- Phased change commenced in April 2022.

What is the change

- FAWS will be available on the Quadcore® KS1000RW panel side lap only.
- The specification of the FAWS sealant is changing from the current formulation to a compressible foam tape that forms a non-adhesive contact seal.

Why the change

- The FAWS is being changed due to production requirements.
- The new FAWS side lap sealant is available for both roof and wall panels and is compatible with all standard panel end lap and cut back size options.

As per previous supplied FAWS sidelap, the seal will terminate at the foam core and will not extend to the endlap. For guidance on the sealant arrangement at end laps for roof and walls panel options, please contact the Tech-eXchange team.

It is highly recommended that contractors and design team professionals request a suitable NBS specification from the Kingspan Tech-eXchange team on a project-by-project basis to suit the intended application.

Should you have any queries on the above or require further information, please do not hesitate to contact the undersigned.

Regards,
Kingspan Insulated Panels Technical Services.
